# Dear Customers,

Are you having trouble with stainless steel parts fusing together due to heat during tightening, especially in your beloved vehicle's custom work or plant's maintenance work?

Before resorting to destroying and removing each part, give this a try first.

PENETRATING LUBRICANT  MADE IN JAPAN

# ねじ神様 NEJIGAMI

Revolutionizing the Way You Think

Not a single case where it didn't work!  
Stuck stainless bolt, screw, or nut? Call the NEJIGAMI!

The seizing/bonding of the stainless two metals can be removed with this!

Solve the problem!

**Usage**

- For removing stainless-steel bolts and nuts that have become immovable due to thread galling or seizing in environments such as plants, construction sites, shipbuilding, automobiles, machinery and piping systems.
- For preventing thread galling and seizing during disassemble
- For non stainless-steel bolts and nuts (If there is rust or dirt, lightly remove it with a brush before use)

\*This is not a volatile type. Please use a parts cleaner or similar product for cleaning.

How to Use

ISN'T YOUR SUPPLY ROUTE A BIT TOO COMPLICATED?

# SUNCO MAKES IT SIMPLE - ONE ORDER, ONE SOLUTION

Hi! I'm Mike!  
I work on building data centres  
overseas.

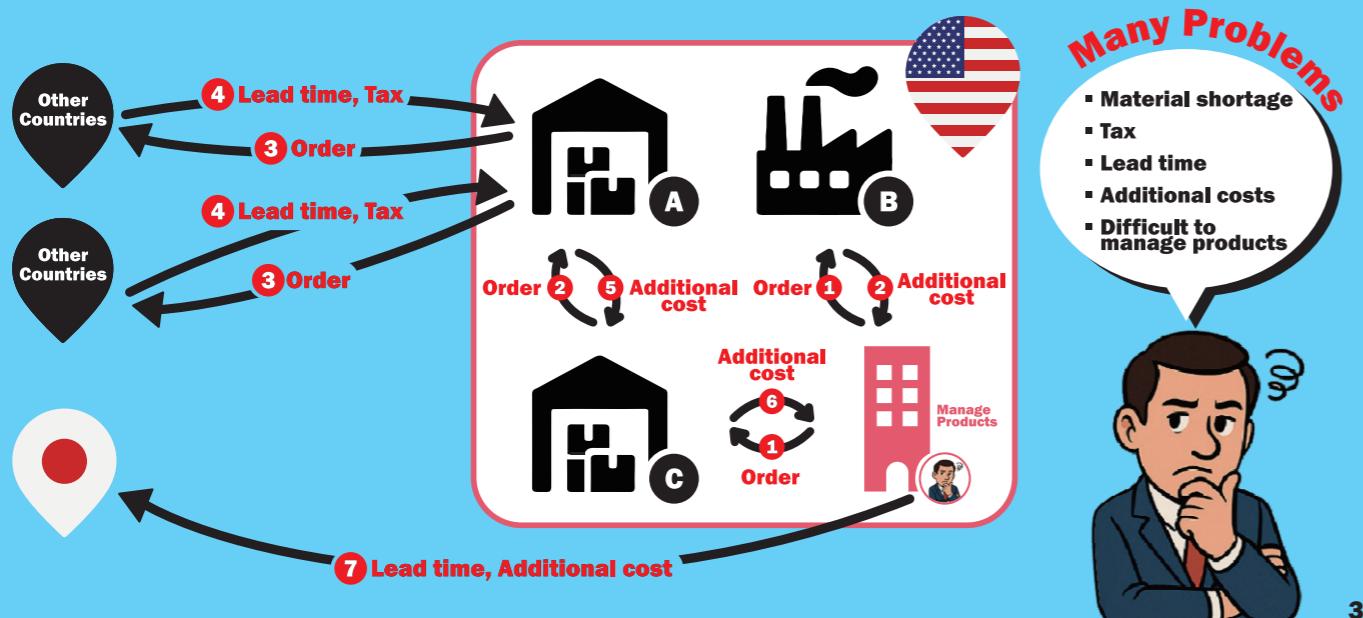

I've heard data centre projects are  
booming here lately.

JAPAN

This time, we're  
building one in Japan!

Data Centre

The route is complicated and hard to manage... How can I make this easier...

When it comes to  
screws used in Japan,  
leave it to me!

Huh!? Who's that!?

BOOM!

You just popped out of nowhere  
saying "leave it to me"...  
What exactly can you do?

If you're building in  
Japan, just rely on a  
Japanese company!

No Tariff & All complex management is handled by SUNCO!

Efficient Inventory and Delivery  
Management as a Warehouse

SUNCO

Only Order  
1

I get it!!

So all I need to do is place an  
order with SUNCO, and  
everything's taken care of!

Of course, it's not just data centers!

- Theme Parks
- Stadium construction
- Integrated Resort (IR)
- Cruise ship maintenance
- Semiconductor Plants
- Wind power facilities

# Use Us as Your Warehouse

**- Flexible Shipping System Selling from just One Piece  
to Meet A Multitude of Needs -**

**(Picture 1)** Distribution centre **(Picture 2)** Fasteners are transported on conveyor belts like *Kaiten Sushi*.  
**(Picture 3)** Containers used to store products.

(Picture 4) On the monitor, products to be shipped are highlighted in pink for easy identification.

Is it possible to buy just a single fastener? With Sunco Industries' Bara Shipping service, the answer is YES! This unique service allows customers to order exactly the quantity they need - even just one piece. In many cases, companies that use fasteners only need a small quantity, however, due to minimum order requirements, they often end up having to purchase entire boxes, cartons or even pallets. Sunco's Bara Shipping service eliminates this issue by enabling small-lot shipping for most of our product lineups. This helps customers avoid having excess inventory and reduces the burden of warehouse management. Our customers can order the exact quantity needed, exactly when they need it.

The success of Bara Shipping is supported by our proprietary Rotary Rack, developed exclusively for Sunco, and a small conveyor belt system where fasteners are placed in small dishes that move - like *Kaiten Sushi* - conveyer belt sushi! When an order is placed, light blue containers that contain the correct products are delivered automatically. Employees scan the barcode on the container and products in it are displayed on a monitor with products that need to be shipped highlighted in pink (see Picture 4). Employees just need to pick up the products shown on screen. This ensures accurate selection, with minimal risk of error. The selected items are then placed on a dish and sent down the conveyer belt to the next station, where they are packed in the exact quantities ordered.

The service was launched in response to a growing demand for flexible ordering following the 2008 financial crisis. At the time, some employees expressed concern, saying “this isn’t efficient or profitable.” However, President Okuyama felt differently. He believed that Sunco’s true value lay in challenging a seemingly “inefficient” system for the sake of its customers. Rather than being discouraged, the internal pushback strengthened his resolve. Once the service was introduced, customer feedback poured in – many requested that more products be made available through Bara Shipping. Before the financial crisis, this type of shipping accounted for less than 2% of the total sales. Today, it represents nearly half of the company’s revenue. What was once met with skepticism has become a core part of Sunco’s business and a recognized value-added service to the industry.

As demand for Bara Shipping continues to grow, even as overall fastener demand declines, this financial year sees Sunco Industries expanding its Rotary Rack - where products sold by Bara Shipping service are stored, as well as increasing the number of fulfilment stations. These enhancements will further strengthen the company's shipping capabilities and response to customers' demands. This will also help to achieve Sunco's mission: "to deliver exact quantities of JIS fasteners needed, anywhere in the world".

Article by Ikumi Shinomiya

---

Sunco Industries is running a free shipping campaign from 1st September to 30th November 2025. Take this opportunity to try out Sunco's services! Of course, you can place an order starting from just one fastener!

Scan the QR code to explore Sunco's advanced distribution center.

# SUNCO is surprisingly great at packaging!

We do our packing in a dedicated space in our distribution centre. There are 8 packaging machines, working to reduce labour and improve operation efficiency. We use both 4-unit (multi-line) and single-unit packing machines and flexibly handle both large-volume and multi-variety packaging. Additionally, we also have 10 manual packaging spaces. In total, we can package up to 3 million items a day.

Let Sunco deal with your packaging needs!

## < Perform weight checks on every single bag>

All items packaged by our automatic bagging machine undergo a complete weight check after packaging. If there are no issues, the bags pass through the rollers, if any irregularities are detected, they are sorted out at that point. Even in manual operations, every single bag is checked using an electronic scale to ensure the accuracy that maintains our clients' trust.

## <Flexible support for packaging styles>

○ Printed bags  
We can customise by printing text directly onto plastic bags before packaging.

○ Paper label insertion  
We can prepare and insert paper labels into the packaging. Customer-supplied labels are also accepted.

○ Single or mixed items  
We can package single products or multiple different items together in one bag.

○ Mixed bag sets  
We can combine various pre-packaged items into a larger bag for mixed sets.

SOCKET BOY Website

# Hello Socket Boys and Girls Around the World!

There are still many fastener  
companies around the world  
that we don't know about.  
Let's say hello...

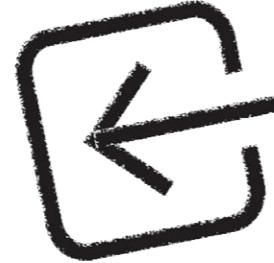

## ZEDPARTS

Products for Classic Motorcycle Lovers Around the World

Address:  
5 Finstall Road Aston Fields  
Bromsgrove, B60 2EA  
Worcestershire  
United Kingdom  
TEL: +44 (0)152-7878-237  
Contact: Oz and Deborah Ozanne

ZEDPARTS sells products that motorcycle enthusiasts, especially enthusiasts for classic motorcycles, will adore. The company was founded by Mr. Oz Ozanne in 2007 and today he, his wife Deborah and eldest daughter, Emma sell screws on their website. About 30 years ago, Mr.Ozanne suffered a serious injury that broke his spine, but was fortunate enough not to be confined to a wheelchair. He was determined to show his children, who were still young at the time, that he could overcome his disability. His determination led him to start the company that they now operate from their home, utilizing part of it as a warehouse and workspace for the family.

The warm, family atmosphere of this company draws in orders from classic motorcycle enthusiasts from all over the world. Many parts and screws used in classic motorcycles are difficult to obtain, but Mr. Ozanne finds products with the same dimensions and part numbers from schematics and sells equivalent products. Autumn is a particularly busy season while motor shows are being held. Everything is organised by keeping machine screws in small boxes and repacking washers and spring washers into Tupperware-like containers.

Though the volume and variety of shipments are not big, Mr. Ozanne's work is in demand from all over the world.

"The biggest success is that we were able to pioneer this niche market," Mr. Ozanne says with a smile. Inside the shop, there are motorcycles and parts from "KAWASAKI," one of Japan's leading motorcycle manufacturers. In the workshop they perform repairs on vintage motorcycles and overhaul engine parts. Products for motorcycle enthusiasts all over the world are sent out from Birmingham.

In the heart of Clinton Township, Michigan, KM Carburetor is rewriting the rules of motorcycle restoration. Formally established in 2020 by Kurt and Sarah Muehlbacher, this dynamic duo brings passion and precision to their craft with help from motorcycle restoration expert, J.R. Luksik.

Their specialty is breathing life back into the carburetors of vintage Japanese motorcycles. Before they set up their business, they found the norm for restoring carburetors for vintage Japanese motorcycles was to resurrect these gems by re-plating original fasteners and replacing ones that were badly damaged. Few companies stocked new versions of these important tiny warriors and even fewer offered the necessary quality; sourcing them was like searching for a needle in a haystack. Generic, low-quality parts flooded the market, leaving restorers frustrated and compromising the final result. That's where KM Carburetor came in! Their mission is to redefine the carburetor restoration experience. No more generic bags of parts. Instead, their JIS screw kits and carburetor restoration kits are the gold standard - with focus on parts actually made in Japan. They are kits of the highest quality and meticulously curated, with each part individually labelled. Imagine an installer confidently knowing where every screw belongs - that's the KM Carburetor's way. KM Carburetor's strength lies in their ability to offer the most complete solution available by focusing on motorcycles that they are personally familiar with. Their reputation has rippled across America. They're not peddlers; they're curators. Every part they offer they've tested on their own steeds. Fit, function, finesse—it's non-negotiable. They wouldn't sell what they wouldn't ride. Quality isn't a promise; it's their DNA.

## Quality SUNCO quest

**In April 2025, Sunco launched a YouTube channel, “SUNCO Quality Quest”.**

SUNCO Quality Quest takes you behind-the-scenes of how everyday products are made. It invites viewers into the fascinating world of craftsmanship – where passion, precision and dedication come together to create the items we often take for granted.

In the first video, the spotlight is on the renowned British shoemaker, Tricker's. Founded in 1829 and holding a Royal Warrant, Tricker's is a symbol of tradition and excellence. From a single piece of leather to a finished shoe, each step in process reflects the skill and devotion of master artisans.

This channel will continue to deliver rare and captivating videos that are usually hard to come by. If you are curious about the stories and skills behind the products you use every day, this is the place to be. Don't forget to subscribe and give us a like!

### Must-See Highlights:

#### Seamless Stitching by Skilled Hands (4:50 & 15:00)

Watch in awe as artisans sew freehand with astonishing accuracy, allowing no room for even a 1mm error.

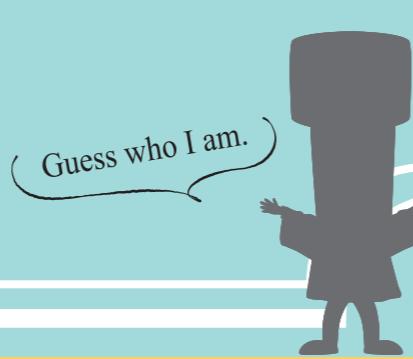

#### Cork Filling the Sole (12:30)

Experience the oddly satisfying process of filling the shoe with cork, as soothing as spreading jam on warm bread.
